

I made a scale model of the emerald moon event (on the back of the puzzle). With this you can find the stone plaque before the event takes place. The only things you need to do:

1. Find the position of the Devil's Tooth at the moment of the event.
2. Find the position of the moon at the moment of the event.
3. Find the position of the stone plaque by placing the jewel in the holder on the moon's location and shine a light through the middle of the jewel in the direction of the Devil's Tooth.
4. Place the jewel in the hole with the correct color in the stone plaque.

Good luck!

Alan
